

MK FRAUD READINESS

Comprehensive fraud-readiness review

Evidence-validated, reviewer-led and board-ready.

ORGANISATION

Kestrel Industrial Supply (Pty) Ltd

NAMED REVIEWER

Independent review lead · Independent Reviewer

REVIEW DATE

10 August 2026

Confidential · decision support, not a legal opinion or certification

The review scope is bounded by named evidence

This product takes the recorded analytical universe through evidence review, interpretation and decision preparation.

INCLUDED

Deterministic score and maturity; material findings; risk register; control actions; evidence checklist; scenarios; contradictions; roadmap; reviewer annotations; management decisions.

NOT INCLUDED

A re-score, legal opinion, investigation, certification programme, or conclusion beyond the evidence examined and the review scope agreed with management.

READING RULE

The recorded assessment answer is never overwritten by reviewer narrative. Each conclusion is labelled as self-reported, evidence reviewed, validated / supported, not validated / insufficient or reviewer judgement.

The evidence review narrows reliance to the named scope

The evidence review supports selected control positions, but the overall readiness position remains the recorded deterministic assessment. 8 evidence item(s) remain unresolved; board reliance should be limited to the reviewed scope and stated evidence boundaries.

Deterministic readiness	Evidence items supported	Unresolved evidence	Decisions required
55	3	8	4
/ 100 · Developing	of 12	items requiring action	management / board items

BOARD IMPLICATION

Approve the Financial Controller mandate for detection ownership and evidence-led oversight.

The recorded position remains separate from assurance

INTERPRETATION BOUNDARY

These metrics are deterministic outputs from the locked assessment run. They are not changed by reviewer judgement; evidence review changes the assurance statement around them.

The evidence ledger shows what can be supported

Validation is scoped to the items named in the evidence request pack. Evidence-item status and finding-level reviewer conclusion remain separate.

8 of 12 items reviewed; 8 unresolved under the locked reconciliation rule.

Source: Kestrel assessment, persisted reviewer record and reconciled evidence register.

Approved fraud risk management policy and committee terms

Fraud leadership and governance

Approved fraud risk management policy and committee terms

Evidence reviewed — supported for stated scope

Demonstrated: The reviewed artefact supports the stated scope.

Reviewer confidence: HIGH

Supplier onboarding sample pack and due-diligence exceptions

Fraud detection capability

Supplier onboarding sample pack and due-diligence exceptions

Evidence reviewed — insufficient for conclusion

Demonstrated: Population completeness or recency could not be established.

Limitation: Population completeness or recency could not be established.

Reviewer confidence: LOW

Detection rule catalogue, tuning log and evidence review record

Operational fraud controls

Detection rule catalogue, tuning log and evidence review record

Evidence reviewed — not supported

Demonstrated: The artefact does not support the recorded control position for the reviewed scope.

Limitation: The artefact does not support the recorded control position for the reviewed scope.

Reviewer confidence: MEDIUM

Whistleblowing case register and independent reporting route

Fraud leadership and governance

Evidence not requested

Audit committee fraud dashboard and management minutes

Fraud detection capability

Evidence not requested

Quarterly fraud risk assessment and residual-risk log

Third-party and supply chain fraud risk

Quarterly fraud risk assessment and residual-risk log

Evidence reviewed — supported for stated scope

Demonstrated: The reviewed artefact supports the stated scope.

Reviewer confidence: HIGH

User access recertification export and removal log

Fraud incident response

User access recertification export and removal log

Evidence reviewed — insufficient for conclusion

Demonstrated: Population completeness or recency could not be established.

Limitation: Population completeness or recency could not be established.

Reviewer confidence: LOW

Incident register, investigation closure pack and lessons log

Fraud culture and awareness

Incident register, investigation closure pack and lessons log

Evidence reviewed

Demonstrated: The artefact was examined; no conclusion is made beyond the stated review scope.

Reviewer confidence: MEDIUM

Reviewer interpretation changes the reliance boundary

The deterministic readiness position remains locked; the review changes the confidence boundary around named evidence and actions.

Source: Kestrel assessment, persisted reviewer record and reconciled evidence register.

The review changes how management may rely on the position

AWARENESS COMPLETION IS NOT RECONCILED TO HIGHER-RISK ROLES

Evidence reviewed

RECORDED POSITION

Self-reported position: Exists only informally or inconsistently

REVIEWER INTERPRETATION

Retain the deterministic issue while keeping assurance bounded.

TRACEABILITY

Detailed references are retained in the annotated register.

COMMITTEE OVERSIGHT DOES NOT YET EVIDENCE A COMPLETE FRAUD-RISK CYCLE

Evidence reviewed — supported for stated scope

RECORDED POSITION

Self-reported position: No control exists

REVIEWER INTERPRETATION

Retain the conclusion for the reviewed scope only.

TRACEABILITY

Detailed references are retained in the annotated register.

Priority findings require evidence-backed action

The report shows the highest-materiality decision items and keeps reviewer conclusions distinct from evidence persistence status. The full finding universe remains in the annotated register.

FINDING 1		Evidence reviewed — supported for stated scope	
Committee oversight does not yet evidence a complete fraud-risk cycle			
DOMAIN	RECORDED RESPONSE		
Fraud leadership and governance	No control exists		
WHY IT MATTERS	REVIEWER OBSERVATION		
The condition can create a credible route for loss, delayed detection or weak challenge in fraud leadership and governance.	The reviewer position for committee oversight does not yet evidence a complete fraud-risk cycle is bounded by the named artefact and stated scope.		
REVIEWER INTERPRETATION	AGREED OWNER / DUE DATE		
Retain the conclusion for the reviewed scope only.	Financial Controller · 30 days		

FINDING 2

Evidence reviewed — insufficient for conclusion

Detection tuning and alert ageing need a fixed management rhythm

DOMAIN

Fraud detection capability

RECORDED RESPONSE

No control exists

WHY IT MATTERS

The condition can create a credible route for loss, delayed detection or weak challenge in fraud detection capability.

REVIEWER OBSERVATION

The reviewer position for detection tuning and alert ageing need a fixed management rhythm is bounded by the named artefact and stated scope.

REVIEWER INTERPRETATION

Retain the deterministic issue while keeping assurance bounded.

EVIDENCE LIMITATION

The review did not establish a complete operating population or sustained effectiveness.

AGREED OWNER / DUE DATE

Financial Controller · 30 days

FINDING 3

Evidence reviewed — not supported

Segregation-of-duties overrides require tighter exception governance

DOMAIN

Operational fraud controls

RECORDED RESPONSE

No control exists

WHY IT MATTERS

The condition can create a credible route for loss, delayed detection or weak challenge in operational fraud controls.

REVIEWER OBSERVATION

The reviewer position for segregation-of-duties overrides require tighter exception governance is bounded by the named artefact and stated scope.

REVIEWER INTERPRETATION

Retain the deterministic issue while keeping assurance bounded.

EVIDENCE LIMITATION

The review did not establish a complete operating population or sustained effectiveness.

AGREED OWNER / DUE DATE

Financial Controller · 30 days

FINDING 4

Evidence reviewed — supported for stated scope

Supplier bank-detail changes need an independent verification step

DOMAIN

Third-party and supply chain fraud risk

RECORDED RESPONSE

Exists only informally or inconsistently

WHY IT MATTERS

The condition can create a credible route for loss, delayed detection or weak challenge in third-party and supply chain fraud risk.

REVIEWER OBSERVATION

The reviewer position for supplier bank-detail changes need an independent verification step is bounded by the named artefact and stated scope.

REVIEWER INTERPRETATION

Retain the conclusion for the reviewed scope only.

AGREED OWNER / DUE DATE

Chief Information Officer · 60 days

FINDING 5

Evidence reviewed — insufficient for conclusion

Incident closure records do not consistently evidence lessons applied

DOMAIN

Fraud incident response

RECORDED RESPONSE

Exists only informally or inconsistently

WHY IT MATTERS

The condition can create a credible route for loss, delayed detection or weak challenge in fraud incident response.

REVIEWER OBSERVATION

The reviewer position for incident closure records do not consistently evidence lessons applied is bounded by the named artefact and stated scope.

REVIEWER INTERPRETATION

Retain the deterministic issue while keeping assurance bounded.

EVIDENCE LIMITATION

The review did not establish a complete operating population or sustained effectiveness.

AGREED OWNER / DUE DATE

Chief Information Officer · 60 days

FINDING 6

Evidence reviewed

Awareness completion is not reconciled to higher-risk roles

DOMAIN

Fraud culture and awareness

RECORDED RESPONSE

Exists only informally or inconsistently

WHY IT MATTERS

The condition can create a credible route for loss, delayed detection or weak challenge in fraud culture and awareness.

REVIEWER OBSERVATION

The reviewer position for awareness completion is not reconciled to higher-risk roles is bounded by the named artefact and stated scope.

REVIEWER INTERPRETATION

Retain the deterministic issue while keeping assurance bounded.

EVIDENCE LIMITATION

The review did not establish a complete operating population or sustained effectiveness.

AGREED OWNER / DUE DATE

Chief Information Officer · 60 days

FINDING 7

Evidence reviewed — supported for stated scope

Privileged access exceptions are not consistently closed

DOMAIN

Digital and identity fraud risk

RECORDED RESPONSE

Operating consistently in practice

WHY IT MATTERS

The condition can create a credible route for loss, delayed detection or weak challenge in digital and identity fraud risk.

REVIEWER OBSERVATION

The reviewer position for privileged access exceptions are not consistently closed is bounded by the named artefact and stated scope.

REVIEWER INTERPRETATION

Retain the conclusion for the reviewed scope only.

AGREED OWNER / DUE DATE

Process owner · 90 days

Independent reporting route coverage is not demonstrated for all workers

DOMAIN

Whistleblowing and reporting culture

RECORDED RESPONSE

Operating consistently in practice

WHY IT MATTERS

The condition can create a credible route for loss, delayed detection or weak challenge in whistleblowing and reporting culture.

REVIEWER OBSERVATION

The reviewer position for independent reporting route coverage is not demonstrated for all workers is bounded by the named artefact and stated scope.

REVIEWER INTERPRETATION

Retain the deterministic issue while keeping assurance bounded.

EVIDENCE LIMITATION

The review did not establish a complete operating population or sustained effectiveness.

AGREED OWNER / DUE DATE

Process owner · 90 days

Open evidence gaps limit reliance

RELIANCE LIMITATION

5 item(s) remain self-reported or insufficient. These are not presented as validated weaknesses; they are assurance gaps that limit reliance. The highest-priority four are shown here; the full set remains in the annotated register.

HIGH PRIORITY

Evidence reviewed — insufficient for conclusion

Supplier onboarding sample pack and due-diligence exceptions

WHAT MK WANTS TO INSPECT

Whether the supplier onboarding sample pack and due-diligence exceptions demonstrates the stated control condition for the reviewed scope.

WHY IT MATTERS

The condition can create a credible route for loss, delayed detection or weak challenge in fraud detection capability.

ACCEPTABLE EXAMPLES

Population is complete; Approvals and exceptions are traceable; Removals are evidenced

REVIEWER NOTE

Population completeness or recency could not be established.

HIGH PRIORITY

Evidence reviewed — not supported

Detection rule catalogue, tuning log and evidence review record

WHAT MK WANTS TO INSPECT

Whether the detection rule catalogue, tuning log and evidence review record demonstrates the stated control condition for the reviewed scope.

WHY IT MATTERS

The condition can create a credible route for loss, delayed detection or weak challenge in operational fraud controls.

ACCEPTABLE EXAMPLES

Population is complete; Approvals and exceptions are traceable; Removals are evidenced

REVIEWER NOTE

The artefact does not support the recorded control position for the reviewed scope.

HIGH PRIORITY

Evidence not requested

Whistleblowing case register and independent reporting route

WHAT MK WANTS TO INSPECT

Whether the whistleblowing case register and independent reporting route demonstrates the stated control condition for the reviewed scope.

WHY IT MATTERS

The condition can create a credible route for loss, delayed detection or weak challenge in fraud leadership and governance.

ACCEPTABLE EXAMPLES

Population is complete; Approvals and exceptions are traceable; Removals are evidenced

REVIEWER NOTE

Reviewer status recorded; see reviewer observation and limitations.

HIGH PRIORITY

Evidence not requested

Audit committee fraud dashboard and management minutes

WHAT MK WANTS TO INSPECT

Whether the audit committee fraud dashboard and management minutes demonstrates the stated control condition for the reviewed scope.

WHY IT MATTERS

The condition can create a credible route for loss, delayed detection or weak challenge in fraud detection capability.

ACCEPTABLE EXAMPLES

Population is complete; Approvals and exceptions are traceable; Removals are evidenced

REVIEWER NOTE

Reviewer status recorded; see reviewer observation and limitations.

Risk pathways show where exposure may persist

Risk rating remains deterministic. The reviewer assurance layer is shown beside it and does not recalculate priority, likelihood or impact.

RISK PATHWAY	DETERMINISTIC POSITION	REVIEWER INTERPRETATION	TARGET
A supplier bank change may redirect a legitimate payment Because independent verification is not demonstrated for the complete change population., there is a risk that an unauthorised event causes financial or operational harm before management can contain it.	Critical · Moderate / High Self-assessment only, not independently verified	The critical pathway remains plausible for the reviewed operating context. Assurance is limited to the named evidence and review scope. No full-population operating validate was performed. Confidence: HIGH	60 days
Privileged access may enable unauthorised record changes Because dormant and emergency access exceptions remain open or insufficiently evidenced., there is a risk that an unauthorised event causes financial or operational harm before management can contain it.	Critical · Low / Moderate Self-assessment only, not independently verified	The critical pathway remains plausible for the reviewed operating context. Assurance is limited to the named evidence and review scope. No full-population operating validate was performed. Confidence: HIGH	90 days
Fraud-risk decisions may remain unchallenged Because a repeatable committee challenge and residual-risk acceptance cycle is not yet evidenced., there is a risk that an unauthorised event causes financial or operational harm before management can contain it.	High · High / High Self-assessment only, not independently verified	The high pathway remains plausible for the reviewed operating context. Assurance is limited to the named evidence and review scope. No full-population operating validate was performed. Confidence: MEDIUM	30 days
Stale detection rules may delay an alert Because tuning and alert ageing lack a fixed, accountable management cadence., there is a risk that an unauthorised event causes financial or operational harm before management can contain it.	High · High / High Self-assessment only, not independently verified	The high pathway remains plausible for the reviewed operating context. Assurance is limited to the named evidence and review scope. No full-population operating validate was performed. Confidence: MEDIUM	30 days
Incident lessons may not reduce repeat exposure Because closure packs do not consistently link root	High · Moderate / High Self-assessment only,	The high pathway remains plausible for the reviewed	60 days

RISK PATHWAY	DETERMINISTIC POSITION	REVIEWER INTERPRETATION	TARGET
cause to implemented control changes., there is a risk that an unauthorised event causes financial or operational harm before management can contain it.	not independently verified	operating context. Assurance is limited to the named evidence and review scope. No full-population operating validate was performed. Confidence: MEDIUM	
An employee may not reach an independent reporting route Because coverage across worker populations and route awareness is not demonstrated., there is a risk that an unauthorised event causes financial or operational harm before management can contain it.	Medium · Low / Moderate Self-assessment only, not independently verified	The medium pathway remains plausible for the reviewed operating context. Assurance is limited to the named evidence and review scope. No full-population operating validate was performed. Confidence: MEDIUM	90 days

Plausible pathways show how controls may be bypassed

These are plausible scenarios linked to the recorded analytical universe. They are not allegations and do not evidence that an event occurred.

PRIVILEGED-ACCESS

Plausible scenario

Supplier bank-detail redirection

CONFIRMED OPERATING CONTEXT

Operational and digital access is material to the organisation.; Access review is recorded as not in place.

MECHANISM

An unauthorised change is made and the audit trail is obscured or discovered late.

CONCEALMENT

Activity is blended into ordinary operational changes.

EARLY WARNING INDICATORS

Overdue access exceptions; Unusual change outside role pattern

LONG-TERM RESPONSE

Implement a complete review and removal rhythm.

DISCLAIMER

This is a plausible scenario, not an allegation, and is not evidence that an event occurred.

ENTRY POINT

A stale or excessive account remains active.

CONTROL BYPASSED

Role-based access review; Exception escalation; Removal evidence

CONSEQUENCE

Unauthorised payments or value leakage.; Containment and investigation are delayed.; Financial leakage; Delayed investigation

IMMEDIATE CONTAINMENT

Review privileged and high-risk access exceptions.

TRACEABILITY

Detailed references are retained in the annotated register.

Incident escalation delay

CONFIRMED OPERATING CONTEXT

Operational and digital access is material to the organisation.; Access review is recorded as not in place.

MECHANISM

An unauthorised change is made and the audit trail is obscured or discovered late.

CONCEALMENT

Activity is blended into ordinary operational changes.

EARLY WARNING INDICATORS

Overdue access exceptions; Unusual change outside role pattern

LONG-TERM RESPONSE

Implement a complete review and removal rhythm.

DISCLAIMER

This is a plausible scenario, not an allegation, and is not evidence that an event occurred.

ENTRY POINT

A stale or excessive account remains active.

CONTROL BYPASSED

Role-based access review; Exception escalation; Removal evidence

CONSEQUENCE

Unauthorised payments or value leakage.; Containment and investigation are delayed.; Financial leakage; Delayed investigation

IMMEDIATE CONTAINMENT

Review privileged and high-risk access exceptions.

TRACEABILITY

Detailed references are retained in the annotated register.

Privileged access misuse

CONFIRMED OPERATING CONTEXT

Manual intervention and exception volume are material.; Detection tuning is recorded as ad hoc.

MECHANISM

Activity continues below or outside stale thresholds until a manual review identifies it.

CONCEALMENT

Activity resembles normal volume or is split across channels.

EARLY WARNING INDICATORS

Rising false negatives; Unreviewed high-risk rules

LONG-TERM RESPONSE

Establish monthly tuning and sign-off.

DISCLAIMER

This is a plausible scenario, not an allegation, and is not evidence that an event occurred.

ENTRY POINT

A pattern changes after the last rule review.

CONTROL BYPASSED

Fixed review cycle; Rule validation; Exception reporting

CONSEQUENCE

Losses accumulate before detection.; Alert queues become noisy and less trusted.; Accumulating loss; Loss of alert confidence

IMMEDIATE CONTAINMENT

Review high-risk rules and open detection exceptions.

TRACEABILITY

Detailed references are retained in the annotated register.

Suppressed reporting

CONFIRMED OPERATING CONTEXT

Manual intervention and exception volume are material.; Detection tuning is recorded as ad hoc.

MECHANISM

Activity continues below or outside stale thresholds until a manual review identifies it.

CONCEALMENT

Activity resembles normal volume or is split across channels.

EARLY WARNING INDICATORS

Rising false negatives; Unreviewed high-risk rules

LONG-TERM RESPONSE

Establish monthly tuning and sign-off.

DISCLAIMER

This is a plausible scenario, not an allegation, and is not evidence that an event occurred.

ENTRY POINT

A pattern changes after the last rule review.

CONTROL BYPASSED

Fixed review cycle; Rule validation; Exception reporting

CONSEQUENCE

Losses accumulate before detection.; Alert queues become noisy and less trusted.; Accumulating loss; Loss of alert confidence

IMMEDIATE CONTAINMENT

Review high-risk rules and open detection exceptions.

TRACEABILITY

Detailed references are retained in the annotated register.

Control design must show how operation will be evidenced

Control design is connected to the recorded finding and evidence question. Reviewer critique is shown beside, and does not mutate, the deterministic design.

CONTROL OBJECTIVE	RECORDED STATE	HUMAN DESIGN CRITIQUE	TARGET / OWNER
Demonstrate that access rights are reviewed and removed when no longer needed.	No control exists; self-assessed and not independently verified. Implement a complete role-based access review with named approver, exception ageing and removal evidence.	The design direction is appropriate but needs complete population, exception handling and effectiveness evidence. Operating effectiveness and exception closure remain to be demonstrated. Implement a complete role-based access review with named approver, exception ageing and removal evidence.	A complete, role-based access review is performed at the required frequency with exceptions evidenced. Chief Operating Officer · 30 days

Leadership must choose owners and trade-offs

The Comprehensive product moves from diagnosis to decisions with traceable ownership. Each option states its cost, benefit, trade-off and, where it is not recommended, the reason for rejection.

ACCOUNTABLE EXECUTIVE MANDATE		Decision required
Approve the Financial Controller mandate for detection ownership and evidence-led oversight.		
WHY NOW The policy is approved, but committee minutes do not show a repeatable challenge, action ageing and residual-risk acceptance cycle.	OPTION ANALYSIS Option A: assign ownership internally: cost — Internal management time and process ownership.; benefit — Builds durable internal ownership and operating context.; trade-off — Slower capability uplift while the operating rhythm is established.; rejection reason — Not recommended where immediate independent validation is needed. Option B: appoint a specialist partner for the first cycle: cost — Specialist fees and a handover dependency.; benefit — Accelerates independent capability and first-cycle delivery.; trade-off — Faster assurance, with recurring cost and dependency on the partner.; recommended option Option C: combine internal ownership with targeted specialist validation.: cost — Targeted validation cost plus internal coordination time.; benefit — Balances internal accountability with specialist assurance at the decision point.; trade-off — Requires clear boundaries so blended ownership does not dilute accountability.; rejection reason — Not recommended where the organisation cannot fund parallel coordination.	
REVIEWER RECOMMENDATION Select Option B: appoint a specialist partner for the first cycle because it gives Financial Controller a named first deliverable and an independent review checkpoint.	RECOMMENDATION RATIONALE This option best balances the stated urgency, control ownership and evidence requirement for Financial Controller.	
MANAGEMENT / BOARD DECISION Management to confirm Financial Controller as accountable and record the selected option.	ACCOUNTABLE EXECUTIVE Financial Controller	
TARGET DATE 29 November 2026	IMMEDIATE DELIVERABLE Approve the detection ownership mandate and first evidence cycle.	
CONSEQUENCE OF DELAY Option B provides the fastest independent capability uplift but creates recurring cost and a handover dependency.	TRACEABILITY Detailed references are retained in the annotated register.	

CONTROL DESIGN STANDARD		Decision required
Approve the operating model for supplier bank-detail verification.		
WHY NOW	OPTION ANALYSIS	

The supplier change report records approvals, but the evidence does not demonstrate independent call-back verification for the complete population.

REVIEWER RECOMMENDATION

Select Option B: require business-owner confirmation because it gives Chief Financial Officer a named first deliverable and an independent review checkpoint.

MANAGEMENT / BOARD DECISION

Management to confirm Chief Financial Officer as accountable and record the selected option.

TARGET DATE

30 October 2026

CONSEQUENCE OF DELAY

Centralisation improves consistency; business-owner confirmation preserves context; a service improves scale but adds vendor dependency.

Option A: centralise verification in Accounts Payable: cost — Internal management time and process ownership.; benefit — Builds durable internal ownership and operating context.; trade-off — Slower capability uplift while the operating rhythm is established.; rejection reason — Not recommended where immediate independent validation is needed. | Option B: require business-owner confirmation: cost — Specialist fees and a handover dependency.; benefit — Accelerates independent capability and first-cycle delivery.; trade-off — Faster assurance, with recurring cost and dependency on the partner.; recommended option | Option C: use a bank-validation service with exception review.: cost — Targeted validation cost plus internal coordination time.; benefit — Balances internal accountability with specialist assurance at the decision point.; trade-off — Requires clear boundaries so blended ownership does not dilute accountability.; rejection reason — Not recommended where the organisation cannot fund parallel coordination.

RECOMMENDATION RATIONALE

This option best balances the stated urgency, control ownership and evidence requirement for Chief Financial Officer.

ACCOUNTABLE EXECUTIVE

Chief Financial Officer

IMMEDIATE DELIVERABLE

Reconcile supplier bank-detail changes and add independent verification.

TRACEABILITY

Detailed references are retained in the annotated register.

SEQUENCING AND DEPENDENCY

Decision required

Approve the sequence for privileged-access exception closure.

WHY NOW

The access export identifies dormant privileged accounts and emergency access, while removal and exception closure are not consistently evidenced.

OPTION ANALYSIS

Option A: close dormant access first: cost — Internal management time and process ownership.; benefit — Builds durable internal ownership and operating context.; trade-off — Slower capability uplift while the operating rhythm is established.; rejection reason — Not recommended where immediate independent validation is needed. | Option B: redesign role profiles first: cost — Specialist fees and a handover dependency.; benefit — Accelerates independent capability and first-cycle delivery.; trade-off — Faster assurance, with recurring cost and dependency on the partner.; recommended option | Option C: run both tracks with weekly exception governance.: cost — Targeted validation cost plus internal coordination time.; benefit — Balances internal accountability with specialist assurance at the decision point.; trade-off — Requires clear boundaries so blended ownership does not dilute accountability.; rejection reason — Not recommended where the organisation cannot fund parallel coordination.

REVIEWER RECOMMENDATION

RECOMMENDATION RATIONALE

Select Option B: redesign role profiles first because it gives Chief Information Officer a named first deliverable and an independent review checkpoint.

MANAGEMENT / BOARD DECISION

Management to confirm Chief Information Officer as accountable and record the selected option.

TARGET DATE

30 October 2026

CONSEQUENCE OF DELAY

Closing dormant access reduces immediate exposure; redesign is more durable; parallel work requires stronger delivery capacity.

This option best balances the stated urgency, control ownership and evidence requirement for Chief Information Officer.

ACCOUNTABLE EXECUTIVE

Chief Information Officer

IMMEDIATE DELIVERABLE

Close dormant privileged access and govern emergency access.

TRACEABILITY

Detailed references are retained in the annotated register.

GOVERNANCE REPORTING CADENCE

Decision required

Approve the independent reporting and incident-learning improvement route.

WHY NOW

The detection catalogue exists, but the tuning log and ageing report do not yet demonstrate a fixed review cycle for high-risk rules.

OPTION ANALYSIS

Option A: strengthen the internal route: cost — Internal management time and process ownership.; benefit — Builds durable internal ownership and operating context.; trade-off — Slower capability uplift while the operating rhythm is established.; rejection reason — Not recommended where immediate independent validation is needed. | Option B: commission an independent channel: cost — Specialist fees and a handover dependency.; benefit — Accelerates independent capability and first-cycle delivery.; trade-off — Faster assurance, with recurring cost and dependency on the partner.; recommended option | Option C: use a blended route with quarterly effectiveness validation.: cost — Targeted validation cost plus internal coordination time.; benefit — Balances internal accountability with specialist assurance at the decision point.; trade-off — Requires clear boundaries so blended ownership does not dilute accountability.; rejection reason — Not recommended where the organisation cannot fund parallel coordination.

REVIEWER RECOMMENDATION

Select Option B: commission an independent channel because it gives Chief People Officer a named first deliverable and an independent review checkpoint.

RECOMMENDATION RATIONALE

This option best balances the stated urgency, control ownership and evidence requirement for Chief People Officer.

MANAGEMENT / BOARD DECISION

Management to confirm Chief People Officer as accountable and record the selected option.

ACCOUNTABLE EXECUTIVE

Chief People Officer

TARGET DATE

29 November 2026

IMMEDIATE DELIVERABLE

Run the first fixed-cycle detection tuning review.

CONSEQUENCE OF DELAY

An independent channel increases confidence quickly; a blended route preserves internal context but needs clear privacy and escalation ownership.

TRACEABILITY

Detailed references are retained in the annotated register.

Agreed actions define ownership and proof

DECISION / ACTION	OWNER	TARGET DATE	STATUS	COMPLETION EVIDENCE
Approve the Financial Controller mandate for detection ownership and evidence-led oversight. Option B provides the fastest independent capability uplift but creates recurring cost and a handover dependency.	Financial Controller	29 November 2026	Accepted	Update the annotated register with the agreed evidence and effectiveness measure.
Approve the operating model for supplier bank-detail verification. Centralisation improves consistency; business-owner confirmation preserves context; a service improves scale but adds vendor dependency.	Chief Financial Officer	30 October 2026	Open	Update the annotated register with the agreed evidence and effectiveness measure.
Approve the sequence for privileged-access exception closure. Closing dormant access reduces immediate exposure; redesign is more durable; parallel work requires stronger delivery capacity.	Chief Information Officer	30 October 2026	Open	Update the annotated register with the agreed evidence and effectiveness measure.
Approve the independent reporting and incident-learning improvement route. An independent channel increases confidence quickly; a blended route preserves internal context but needs clear privacy and escalation ownership.	Chief People Officer	29 November 2026	Open	Update the annotated register with the agreed evidence and effectiveness measure.

Sequenced action creates a reliable control baseline

Near-term actions preserve the dependency-closed Comprehensive projection of the analytical roadmap. The full L1 roadmap remains in the annotated register.

PERIOD	DELIVERABLE	OWNER	DEPENDENCY / EVIDENCE
30 days	Approve the detection ownership mandate and first evidence cycle.	Financial Controller	No dependency recorded · Approved access review export, exception log and removal evidence.
30 days	Run the first fixed-cycle detection tuning review.	Chief Information Officer	No dependency recorded · Approved access review export, exception log and removal evidence.
30 days	Review segregation-of-duties overrides and expiry.	Financial Controller	No dependency recorded · Approved access review export, exception log and removal evidence.
30 days	Reconcile supplier bank-detail changes and add independent verification.	Chief Information Officer	No dependency recorded · Approved access review export, exception log and removal evidence.
60 days	Reconcile supplier bank-detail changes and add independent verification.	Chief Information Officer	No dependency recorded · Tuning log, evidence review results and approvals.
60 days	Reconcile role-based awareness coverage.	Chief Information Officer	No dependency recorded · Tuning log, evidence review results and approvals.
60 days	Link incident closure to root cause and control improvement.	Financial Controller	No dependency recorded · Tuning log, evidence review results and approvals.
90 days	Approve the detection ownership mandate and first evidence cycle.	Financial Controller	No dependency recorded · Completion report, role map and effectiveness review.

IMPLEMENTATION RULE

Do not close an action on narrative completion alone. Record the operating evidence, owner and effectiveness measure in the annotated register.

Uncertainty remains until evidence closes the boundary

The following matters remain uncertain until their evidence boundary is closed or management formally accepts the residual risk.

- Supplier onboarding sample pack and due-diligence exceptions · Evidence reviewed — insufficient for conclusion · Population completeness or recency could not be established.
- Detection rule catalogue, tuning log and evidence review record · Evidence reviewed — not supported · The artefact does not support the recorded control position for the reviewed scope.
- Whistleblowing case register and independent reporting route · Evidence not requested · Reviewer status recorded; see reviewer observation and limitations.
- Audit committee fraud dashboard and management minutes · Evidence not requested · Reviewer status recorded; see reviewer observation and limitations.
- User access recertification export and removal log · Evidence reviewed — insufficient for conclusion · Population completeness or recency could not be established.

TRACKING RECOMMENDATION

Board oversight should track the unresolved evidence count, age of open actions, validation coverage for high-priority controls and overdue management decisions.

The evidence universe reconciles to one conclusion

The evidence ledger is reconciled before management conclusions are presented. Every reviewed item has one and only one outcome.

Total evidence items 12 complete request universe	Evidence reviewed 1 supported + insufficient + not supported + reviewed	Supported 3 reviewed conclusion	Unresolved 8 open or insufficient
--	--	--	--

RECONCILIATION CHECK	RESULT	MANAGEMENT READING
Not reviewed + reviewed = total	$4 + 1 = 12$	Open items remain bounded as self-reported.
Supported + insufficient + not supported + reviewer judgement = reviewed	$3 + 2 + 2 + 0 + 1 = 1$	No outcome is silently dropped.
Unresolved formula	$8 = \text{self-reported} + \text{insufficient} + \text{not supported}$	Closure requires evidence or a recorded management decision.

RELIANCE BOUNDARY

A reviewed artefact can support only the stated population, period and control characteristic. It does not convert unrelated or unreviewed items into assurance.

Reviewer observations preserve the human record

These observations are the human review record behind the conclusion. The annotated register retains the full technical traceability.

SUBJECT	RECORDED POSITION	EVIDENCE EXAMINED	LIMITATION / RESPONSE
Evidence review: Approved fraud risk management policy and committee terms Evidence reviewed — supported for stated scope	The reviewed artefact supports the stated scope.	evidence:	Linked finding and action retained in the register.
Evidence review: Quarterly fraud risk assessment and residual-risk log Evidence reviewed — supported for stated scope	The reviewed artefact supports the stated scope.	evidence:	Linked finding and action retained in the register.
Evidence review: Supplier master change report and bank-detail approval trail Evidence reviewed — supported for stated scope	The reviewed artefact supports the stated scope.	evidence:	Linked finding and action retained in the register.
Evidence review: Supplier onboarding sample pack and due-diligence exceptions Evidence reviewed — insufficient for conclusion	Population completeness or recency could not be established.	evidence:	Linked finding and action retained in the register.
Evidence review: User access recertification export and removal log Evidence reviewed — insufficient for conclusion	Population completeness or recency could not be established.	evidence:	Linked finding and action retained in the register.
Evidence review: Privileged account register and emergency-access review Evidence reviewed — not supported	The artefact does not support the recorded control position for the reviewed scope.	evidence:	Linked finding and action retained in the register.
Evidence review: Detection rule catalogue, tuning log and evidence review record Evidence reviewed — not supported	The artefact does not support the recorded control position for the reviewed scope.	evidence:	Linked finding and action retained in the register.
Evidence review: Incident register, investigation closure pack and lessons log Evidence reviewed	The artefact was examined; no conclusion is made beyond the stated review scope.	evidence:	Linked finding and action retained in the register.

REVIEW DISCIPLINE

The reviewer observation is not a replacement for the deterministic answer. It records what was examined, what it demonstrated and where management still needs to close the boundary.

Effectiveness depends on repeatable evidence

Closure is evidenced through population completeness, approval traceability, exception ageing and a repeatable effectiveness measure.

CONTROL PRIORITY	ACCOUNTABLE OWNER	FIRST EVIDENCE DELIVERABLE	EFFECTIVENESS VALIDATION
Demonstrate that access rights are reviewed and removed when no longer needed.	Chief Operating Officer	Current access review export and exception log	100% of in-scope access reviewed with overdue exceptions escalated.
Demonstrate that access rights are reviewed and removed when no longer needed.	Chief Operating Officer	Current access review export and exception log	100% of in-scope access reviewed with overdue exceptions escalated.
Demonstrate that access rights are reviewed and removed when no longer needed.	Chief Operating Officer	Current access review export and exception log	100% of in-scope access reviewed with overdue exceptions escalated.
Demonstrate that detection rules are reviewed and tuned on a fixed cycle.	Chief Risk Officer	Detection tuning log and rule-change approvals	All active rules reviewed monthly with stale-rule exceptions tracked.
Demonstrate that detection rules are reviewed and tuned on a fixed cycle.	Chief Risk Officer	Detection tuning log and rule-change approvals	All active rules reviewed monthly with stale-rule exceptions tracked.
Demonstrate that detection rules are reviewed and tuned on a fixed cycle.	Chief Risk Officer	Detection tuning log and rule-change approvals	All active rules reviewed monthly with stale-rule exceptions tracked.

CLOSURE RULE

Close only when the register shows the population, exceptions, approvals, operating sample and next effectiveness review.

Options make cost, benefit and trade-offs explicit

Each decision is presented with distinct options so management can record cost, speed, ownership and control consequences explicitly.

Option	Decision	Accountable owner	Timing	Trade-off
Approve the Financial Controller mandate for detection ownership and evidence-led oversight.	Option A: assign ownership internally; Option B: appoint a specialist partner for the first cycle; Option C: combine internal ownership with targeted specialist validation.	Financial Controller	30 days	Option B provides the fastest independent capability uplift but creates recurring cost and a handover dependency.
Approve the operating model for supplier bank-detail verification.	Option A: centralise verification in Accounts Payable; Option B: require business-owner confirmation; Option C: use a bank-validation service with exception review.	Chief Financial Officer	60 days	Centralisation improves consistency; business-owner confirmation preserves context; a service improves scale but adds vendor dependency.
Approve the sequence for privileged-access exception closure.	Option A: close dormant access first; Option B: redesign role profiles first; Option C: run both tracks with weekly exception governance.	Chief Information Officer	90 days	Closing dormant access reduces immediate exposure; redesign is more durable; parallel work requires stronger delivery capacity.
Approve the independent reporting and incident-learning improvement route.	Option A: strengthen the internal route; Option B: commission an independent channel; Option C: use a blended route with quarterly effectiveness testing.	Chief People Officer	30 days	An independent channel increases confidence quickly; a blended route preserves internal context but needs clear privacy and escalation ownership.

Management cadence converts evidence into oversight

The review becomes useful when owners convert the evidence boundary into a repeatable management rhythm.

MONTHLY

Review high-risk detection rules, alert ageing, supplier bank-detail exceptions and privileged-access exceptions.

QUARTERLY

Reconcile the fraud-risk population, committee challenge, whistleblowing route coverage and awareness exceptions.

BOARD CHECKPOINT

Review supported conclusions, unresolved count, action ageing, accepted residual risk and decision status.

ESCALATION

Escalate overdue critical exceptions, incomplete populations and any control claim that cannot be reproduced from the named evidence.

MANAGEMENT VALIDATION

Can the accountable owner reproduce the evidence, explain the exception threshold and show that the control operated again after remediation?

The method and limitations bound the conclusion

ANALYTICAL BASIS

Existing locked deterministic score, maturity, evidence-model material findings, risk register, control-action register, evidence checklist, scenarios, contradictions and roadmap.

REVIEWER BASIS

Named reviewer observations, evidence examined, validation status, limitations, adjusted interpretation and management responses supplied for this engagement.

LIMITATIONS

No inference beyond reviewed evidence; no legal or forensic conclusion; no hidden validation; no silent mutation of answers.

TRACEABILITY

Detailed evidence, finding and methodology references are retained in the annotated register.

CONTROL COMPLETENESS

What; Who; Population; Frequency; Evidence retained; Independent check; Escalation trigger / recipient; SLA; Effectiveness measure; Failure response.

Source: persisted assessment, evidence model and annotated register.

STATUS VOCABULARY

Self-reported is not validated. Evidence reviewed means the artefact was examined, not that the control was supported. Validated / supported is used only where the named reviewer recorded that status for the stated scope.

The named reviewer records the review boundary

REVIEWER

Independent review lead

ROLE

Independent Reviewer

ORGANISATION

REVIEW DATE

10 August 2026

SIGN-OFF STATUS

Signed

SIGNED AT

10 August 2026

REVIEWER NOTE

Reviewed for owner discussion and evidence-linked management action.

BOARD DECISIONS CAPTURED

Management to confirm the selected option, owner and evidence checkpoint for Financial Controller.; Management to confirm the selected option, owner and evidence checkpoint for Chief Financial Officer.; Management to confirm the selected option, owner and evidence checkpoint for Chief Information Officer.; Management to confirm the selected option, owner and evidence checkpoint for Chief People Officer.

SCOPE ACKNOWLEDGEMENT

This report is a decision-support deliverable. It is bounded by the information supplied, the evidence examined and the limitations recorded by the named reviewer.
