

MK FRAUD READINESS

Comprehensive management workshop

Turn evidence review into owned decisions, sequenced actions and a board-ready checkpoint.

Kestrel Industrial Supply (Pty) Ltd

Named reviewer: Independent review lead · Independent reviewer

Review date: 10 August 2026

The session should end with decisions, owners and proof

This workshop is a working session, not a read-out. The aim is to challenge the evidence boundary, decide what management will do and agree what the board should see next.

By the end

- Agree which priority findings reflect the operating reality.
- Confirm what the evidence does and does not demonstrate.
- Choose treatment options and make ownership explicit.
- Set the next checkpoint and the evidence required to close it.

Working boundary

- Do not rewrite the recorded assessment through discussion alone.
- Do not describe an artefact as supported beyond the reviewed scope.
- Do not close an action without operating evidence and an effectiveness measure.
- Escalate unresolved disagreements rather than smoothing them over.

A 140-minute conversation with a clear output at every stage

TIME	CONVERSATION	PURPOSE	OUTPUT
25 min	Findings challenge	validate whether the recorded findings reflect the operating reality.	Agreed or challenged finding statements
25 min	Evidence disagreements	Surface gaps between self-report, artefacts examined and reviewer judgement.	Evidence status and limitation decisions
20 min	Ownership	Confirm accountable executive, process owner and oversight function.	Named owner map
25 min	Action prioritisation	Sequence actions by materiality, dependency and implementation capacity.	30/60/90 priority sequence
20 min	Board decisions	Confirm risk treatment, funding, acceptance and reporting cadence.	Decision log with due dates
25 min	Implementation sequencing	Define first deliverables, evidence of completion and escalation thresholds.	Next-90-day delivery plan

Facilitator cue

Keep the group moving from evidence to decision. Capture disagreements in plain language and validate every proposed action for owner, date, dependency and proof.

Start with what the review can legitimately support

Use the evidence ledger to ask one question: what would have to be true for management to rely on this position?

SUPPORTED FOR STATED SCOPE

Approved fraud risk management policy and committee terms

The reviewed artefact supports the stated scope.

Decision to capture: what is the agreed boundary of reliance?

INSUFFICIENT FOR CONCLUSION

Supplier onboarding sample pack and due-diligence exceptions

Population completeness or recency could not be established.

Decision to capture: what is the agreed boundary of reliance?

SELF-REPORTED POSITION

Detection rule catalogue, tuning log and alert ageing report

The artefact does not support the recorded control position for the reviewed scope.

Decision to capture: what is the agreed boundary of reliance?

SELF-REPORTED POSITION

Whistleblowing case register and independent reporting route

Reviewer status recorded; see reviewer observation and limitations.

Decision to capture: what is the agreed boundary of reliance?

SELF-REPORTED POSITION

Audit committee fraud dashboard and management minutes

Reviewer status recorded; see reviewer observation and limitations.

Decision to capture: what is the agreed boundary of reliance?

SUPPORTED FOR STATED SCOPE

Quarterly fraud risk assessment and residual-risk log

The reviewed artefact supports the stated scope.

Decision to capture: what is the agreed boundary of reliance?

Validate the priority findings against operating reality

For each finding, ask whether the statement is accurate, what population it covers and what would prove the control is working.

01 Committee oversight does not yet evidence a complete fraud-risk cycle

The condition can create a credible route for loss, delayed detection or weak challenge in fraud leadership and governance.

Challenge: The reviewer position for committee oversight does not yet evidence a complete fraud-risk cycle is bounded by the named artefact and stated scope.

02 Supplier bank-detail changes need an independent verification step

The condition can create a credible route for loss, delayed detection or weak challenge in third-party and supply chain fraud risk.

Challenge: The reviewer position for supplier bank-detail changes need an independent verification step is bounded by the named artefact and stated scope.

03 Privileged access exceptions are not consistently closed

The condition can create a credible route for loss, delayed detection or weak challenge in digital and identity fraud risk.

Challenge: The reviewer position for privileged access exceptions are not consistently closed is bounded by the named artefact and stated scope.

04 Detection tuning and alert ageing need a fixed management rhythm

The condition can create a credible route for loss, delayed detection or weak challenge in fraud detection capability.

Challenge: The reviewer position for detection tuning and alert ageing need a fixed management rhythm is bounded by the named artefact and stated scope.

05 Incident closure records do not consistently evidence lessons applied

The condition can create a credible route for loss, delayed detection or weak challenge in fraud incident response.

Challenge: The reviewer position for incident closure records do not consistently evidence lessons applied is bounded by the named artefact and stated scope.

Make the trade-offs visible before choosing a path

A decision is not complete until the group can explain what it is choosing, what it is giving up and how progress will be evidenced.

Approve the Financial Controller mandate for detection ownership and evidence-led oversight.

Options

- Option A: assign ownership internally
- Option B: appoint a specialist partner for the first cycle
- Option C: combine internal ownership with targeted specialist validation.

Trade-offs

- Option B provides the fastest independent capability uplift but creates recurring cost and a handover dependency.

Decision / owner / date:

Approve the operating model for supplier bank-detail verification.

Options

- Option A: centralise verification in Accounts Payable
- Option B: require business-owner confirmation
- Option C: use a bank-validation service with exception review.

Trade-offs

- Centralisation improves consistency; business-owner confirmation preserves context; a service improves scale but adds vendor dependency.

Decision / owner / date:

Approve the sequence for privileged-access exception closure.

Options

- Option A: close dormant access first
- Option B: redesign role profiles first
- Option C: run both tracks with weekly exception governance.

Trade-offs

- Closing dormant access reduces immediate exposure; redesign is more durable; parallel work requires stronger delivery capacity.

Decision / owner / date:

Convert decisions into accountable action

The owner is the person who can make the operating change happen. The oversight function checks that the change is real and sustained.

PRIORITY ACTION	ACCOUNTABLE OWNER	OVERSIGHT	FIRST PROOF
Approve the detection ownership mandate and first evidence cycle.	Financial Controller	Risk and Audit Committee	Approved access review export, exception log and removal evidence.
Reconcile supplier bank-detail changes and add independent verification.	Chief Information Officer	Risk Committee	Tuning log, validate results and approvals.
Close dormant privileged access and govern emergency access.	Financial Controller	Risk Committee	Completion report, role map and effectiveness review.
Run the first fixed-cycle detection tuning review.	Chief Information Officer	Risk and Audit Committee	Approved access review export, exception log and removal evidence.
Link incident closure to root cause and control improvement.	Financial Controller	Risk Committee	Tuning log, validate results and approvals.
validate independent reporting route coverage.	Chief Information Officer	Risk Committee	Completion report, role map and effectiveness review.

Ownership gaps to resolve in the room

1.

2.

3.

Protect dependencies so early action creates momentum

Sequence the work so foundational ownership, population definition and evidence production happen before effectiveness claims are made.

30 days

- Approve the detection ownership mandate and first evidence cycle.
- Run the first fixed-cycle detection tuning review.
- Review segregation-of-duties overrides and expiry.

60 days

- Reconcile supplier bank-detail changes and add independent verification.
- Link incident closure to root cause and control improvement.
- Reconcile role-based awareness coverage.

90 days

- Close dormant privileged access and govern emergency access.
- validate independent reporting route coverage.
- Approve the detection ownership mandate and first evidence cycle.

Dependency check

Which action must happen first? What decision, data, budget or owner is needed before it can start? What is the escalation threshold if the dependency is not cleared?

Leave the room with a usable decision record

Decision record

Decision:

Options considered:

Selected path:

Owner:

Date:

Evidence of completion:

Action record

Action:

Accountable executive:

Process owner:

_____ Oversight:

Dependency / escalation:

Next checkpoint:

Confirm what happens next and what the board will see

Read the decisions back to the group. Confirm the owner, date, evidence requirement and escalation route for every item that remains open.

Next checkpoint

Bring the annotated register, the completed evidence items, the action-ageing view and the agreed effectiveness measures to the next management or board review.

- Named owners have accepted the actions.
- Dates and dependencies are recorded.
- Evidence requirements are specific enough to validate.
- Residual risk or unresolved evidence is explicit.
- The next checkpoint has a date and an audience.

Facilitator note: preserve the distinction between self-reported position, evidence reviewed, supported for stated scope and reviewer judgement in every follow-up pack.
